

Running to Regulate AI

AI should **Work For All of Us**. To make it happen we need laws that **Protect People**, **Protect The Environment**, and **Protect Our Future**.

Protect People

Extend consumer protection to AI software, making tool operators responsible for the impact of their tools

Protect Our Safety

- Require disclosure & appeal paths when consequential decisions are made by AI
- Clarify Section 230 to specifically exclude algorithmic feeds and content generated by the platform's employees or software

Protect Our Work

- Modernize and enforce our copyright laws
- Restore the right to overtime when employees work more than 40 hours a week

Protect Our Children

- No federal funds for AI text generation in schools until at least 9th grade
- Require operating systems to support age attestation while preempting state-level self-doxing laws

Protect Our Privacy

- Implement comprehensive data & privacy protections, including regulating data brokers
- End government mass surveillance and defend the 4th Amendment

Protect The Environment

Set the standards for hyper-scale data centers at the federal level.

Good data centers create more jobs. The companies building these well should be on a level playing field with the slop factories cutting every corner they can find.

Protect Our Land

- Restore mandatory environmental review for hyper-scale data projects, while improving the speed & lowering the cost
- Restore the Office of Noise Abatement & Control at the EPA

Protect Our Resources

- Require sustainable water plans for hyper-scale data centers
- Require new development to fund green energy generation and upgrades to the grid

Protect Our Democracy

- Stop corruption by preventing political control over development, deployment or use
- Re-establish the Office of Technological Assessment to offer Congress non-partisan, independent advice on technical legislation

Protect Our Future

Equalize taxes on capital and labor, so we don't reward companies that replace humans with robots

Protect Our Government

- Ensure the government owns its critical technology and infrastructure, instead of renting
- Enforce anti-trust law, breaking up tech giants that are too big to fail or abuse their market power

Protect Our Society

- Establish sustainable funding for Social Security & Medicare from automation
- Prevent AI misinformation and deep fakes

Protect Our World

- Ban autonomous weapons and automated private armies
- Lead international cooperation towards sustainable, democratically-controlled AI

Protect Our Commons

- Directly support human writing, research, art, education and open-source software
- Restore the Corporation For Public Broadcasting and create a new Corporation For Public Journalism to support nonprofit print journalism across America
